## Overview

---

The 12vDC 24vDC or -12vDC configuration will deliver about 3 Amperes at 24v 65 Watts, or -12v 32 Watts. To do this you convert 12vDC to 12vAC, full-wave rectify this and put the new isolated 12vDC in series with the input 12vDC. Your output will then be 24vDC at 3 Amperes, for. When you hook up to a 50 amp power you get 2 legs at 50 amps each but 180 degrees out of phase - so you have access to 220 volts. So you need to either use all 110v stuff or spend a lot of time and engineering to get the 220v stuff so you don't blow it up. But the battery bank in your RV provides 12V DC power. So, when the source of your RV's power is a battery bank (as it is when. It is basically an inverter for converting power from 12v DC to something else. This includes most laptops, common household equipment, and our beloved Instant.
