# **Are you afraid of rain when installing photovoltaic brackets**

## Overview

---

Avoid installing the brackets during bad weather like heavy rain, strong winds, or storms. These conditions can not only make the installation process difficult but also pose a serious safety risk. But don't be disheartened! To make an informed decision, understanding the risks, benefits, and best practices is crucial. This article will provide you with all the details you need. In the face of sudden natural disasters, how can you minimize solar installations loss?

. How to ensure your solar power station not be affected by the weather?

I have seen such a passage, "It's raining, what washed away, It's sunny, what bring ?

" For those who installed photovoltaic power plants: Rainy days, washed away the income, the sunny day, brought benefits. Then, how can we. While there could always be additional dangers on a job site, the below list discusses some of the most common ones encountered during solar system installation. Trips and Falls As mentioned, falls are probably the first hazard that comes to mind for most people when dealing with solar. Safety glasses are a must to protect the eyes from flying debris, such as small metal fragments during the installation of mounting brackets or glass shards in case of accidental panel breakage.
