# Argentina s wind power new energy and energy storage policy

## Overview

---

The country has set ambitious targets, including achieving a 20% renewable electricity share by 2025, phase-out of fossil fuels, and support cleaner technologies. There have been visible programs like RenovAr, but they have slowed down amid economic turbulence. The Milei administration continues to enact profound market reforms, including trade liberalization. Argentina's vast solar, wind, and hydroelectric renewable energy potential, give it the possibility to decarbonize its power sector and support its COP26 goal of increasing the share of renewable. In a semester marked by historic achievements, wind farms positioned themselves as the main growth engine of the Argentine renewable energy sector, surpassing all other green technologies. Financing hurdles like inflation, weak bonds, and grid gaps slow renewable energy progress. 4 billion of hydropower investments by 2030. 7% by 2030 compared to 2007 levels (Recalde, 2017).

## Argentina's wind power new energy and energy storage policy
