# **Calculation of current when photovoltaic panels are connected to inverters**

## Overview

---

Enter your solar panel's voltage ( $V_{mp}$ ), current ( $I_{mp}$ ), and the number of panels you're wiring together. Use this to match your inverter and battery. Short-Circuit Current ( $I_{sc}$ ): The current flowing when the panel's terminals are directly connected. A grid-tied system is used to. In this post I have explained through calculations how to select and interface the solar panel, inverter and charger controller combinations correctly, for acquiring the most optimal results from the set up. These values are stated in the product datasheets. Enter the Specifications of.
