State challenges with solar power
Public opinion

Solar power has been growing rapidly in the U.S. state of California because of high insolation, community support, declining solar costs, and a renewable portfolio standard which requires that 60% of California's electricity come from renewable resources by 2030, with 100% by 2045. Much of this is expected to come from solar power via photovoltaic facilities or concentrated solar power facilities.

Copenhagen Infrastructure Partners

Copenhagen Infrastructure Partners is a global leader in renewable energy investments and make significant and meaningful contributions to the green transition.
