Can batteries be used for home solar power generation

Overview

Most batteries use lithium-ion technology. They work together to supply power when the grid fails or when rates are high. A solar battery helps store solar energy for later use. With this in mind, there is no single “best” battery. There are different solutions to meet the varying requirements and needs of homeowners across the country. If you'd rather stay green and avoid fuel costs, batteries or solar-powered “generators” (portable battery packs) can give you backup power instead of a traditional gas or propane generator. Solar panels and generators don't usually run at the same time, but they. That's why residential solar power combined with battery storage (once an esoteric niche industry) is rapidly becoming a mainstream disaster-preparedness choice, according to more than a dozen installers, manufacturers, and industry experts we interviewed.
