Can the apcups host be connected to a non-original battery cabinet

Overview

Create a dedicated non-root user to run the service with no login shell: Create this file on your system: `/lib/systemd/system/apcupsd_exporter.service`. And you can check the status of the service: `systemctl status apcupsd_exporter`. My Linux nas server connected to APC SmartUPS using usb cable and I would like to detect a power failure. If power is not restored my server must shutdown when the battery is exhausted. How do I configure and use my APC SmartUPS under Debina / Ubuntu / RHEL / CentOS / Fedora / Scientific Linux. `apcupsd` is simple enough to install on a few systems without using Docker, but if you have many systems to manage, the Docker approach makes deployment and management a breeze. SmartUPS driver and VBS modules 7. The APC UPS can communicate with the Linux system through either a RS-232 or USB serial connection.

Can the apcups host be connected to a non-original battery cabinet

APC UPS Monitoring Software Manual , PDF , Ip Address
