

**Espay Solar Energy S.L.**

# **Central africa solar energy**

## Overview

---

The Central African Republic has emerged as the continental leader, producing more than one-third of its energy from solar power—the highest solar penetration rate in Africa's electricity mix. The solar revolution extends beyond just one country. 5 GW of new solar PV capacity in 2025, representing a 54% increase from 2024, according to the Global Solar Council. These additions occurred amid ongoing electricity supply challenges. The Central African Republic (CAR) has formally launched a nationwide solar electrification programme aimed at expanding access to clean, reliable power for public institutions and communities across the country. The continent installed a record 4.6 GW, Nigeria (803 MW), and Egypt (500 MW) led the charge, driving a market that analysts predict could grow sixfold to 33 GW by 2029. The solar park, comprising 47,000 solar panels, supplies 250,000 people with renewable.
