# Collect solar power

## Overview

---

The most common devices used to collect solar energy and convert it to thermal energy are flat-plate collectors. Charles Fritts at a crazy 44 years later built the first photovoltaic solar cell with a design based on selenium wafers in 1883. Notably, solar panels are the most common; they convert sunlight directly into electricity through photovoltaic cells, making them highly versatile and widely. Solar energy harvesting is a key solution for sustainable energy production, effectively utilizing the sun's power to address increasing energy demands.
