# **Compressed Air Energy Storage Project Introduction**

## Overview

---

CAES involves compressing air in an underground storage cavern during off-peak hours, typically using electricity generated from renewable sources or excess power from the grid. Renewable energy sources such as wind and solar power, despite their many benefits, are inherently intermittent. [1] The first utility-scale CAES project was in the Huntorf power plant in Elsfleth, Germany. Compressed Air Energy Storage (CAES) represents an innovative approach to harnessing and storing energy. This paper surveys state-of-the-art technologies of CAES, and makes endeavors to demonstrate the fundamentals and efficiency of compressed air energy storage systems.
