# **Demand response amsterdam**

## Overview

---

The rapid shift to sustainable energy is driving a surge in electricity demand. While green electricity represents a big part of the future (next to energy storage, hydrogen and others), the current infrastructure of the Dutch electricity grid is struggling to keep pace. For companies such as horticulturists, cold stores, industry, but also data centres, hospitals and schools, demand response offers significant cost. In 2017, the (then) Energy research Centre of the Netherlands (ECN) published the major findings of the FLEXNET project on the demand and supply of flexibility by the power system of the Netherlands over the years 2015-2050 (Sijm et al. Grid congestion - a. On 7 March 2025, ACER submitted its proposal for a new EU-wide network code on demand response to the European Commission. The new NC DR will be the future European regulatory framework for local flexibility markets for congestion management - a field in. Magnus Energy was commissioned by the Dutch Ministry of Climate and Green Growth to explore the role and the potential of demand response in supporting security of supply.
