Distributed flat roof photovoltaic bracket

Overview

Engineered for concrete flat roofs, this non-penetrating ballast mounting system eliminates roof damage while securing solar arrays. High-strength aluminum alloy frames and stainless steel clamps withstand 60m/s winds and 1. With the COMPACTFLAT S system, we revolutionized the world of PV substructures. We challenged the standard rail substructures on the market and designed substructures based on aluminum brackets, making a name for ourselves worldwide. The low weight and compactness of the brackets make them easy to. Adding solar to a flat roof has built-in complexity and requires a wide array of options to meet the building requirements—such as a mechanically attached system, a ballasted system, or even a hybrid system. An attached system that utilizes Aire Rails or XR Rails to support a wide range of solar. Ours are designed and proven to resist anything nature throws at them, from heavy snow and thick ice to extreme heat and strong winds, all while complying with the relevant and appropriate building regulations. The short components allow easy handling as well as low logistical effort, as they require little space and can also be transported in small vehicles. Our.
