

Espay Solar Energy S.L.

Does installing photovoltaic panels work well

Overview

Homeowners who install solar power systems can receive many benefits: reduced electric bills, lower carbon footprints, and potentially higher home values. However, these benefits can come with significant installation and maintenance costs and gains can vary from one house to another. Solar panels are an upfront investment that can save homeowners a significant amount of money in energy costs over the life span of the panels. With current tax credits and incentives, the average payback period for solar panels is between six and 10 years. If you own your home, you'll capture all those benefits.
