Does the community wall generate electricity from solar energy

Overview

Community solar projects generate electricity from sunlight and the electricity flows through a meter to the utility grid. It's sort of like a solar power plant, which centralizes the sourcing of solar energy. Many people either don't know it exists or think. With over 8.6 gigawatts of cumulative capacity installed across 44 states as of 2025, community solar is addressing the needs of the 80% of Americans who cannot access rooftop solar. The market is projected to add more than 6 gigawatts of additional capacity over the next five years, making solar. While solar can be the perfect solution for high energy bills for many homeowners, rooftop PV isn't feasible for a number of us due to space constraints, renting, zoning, and roof types.
