Energy storage ems system is also called cooperative control

Overview

What is the energy storage master control called?

The master control system for energy storage is commonly referred to as an Energy Management System (EMS), Battery Management System (BMS), or simply Control System. Energy management systems (EMSs) are required to utilize energy storage effectively and safely as a flexible grid asset that can provide multiple grid services. An EMS needs to be able to accommodate a variety of use cases and regulatory environments. This is a System Level Use Case which describes high level interaction among energy management systems (EMS) within an Area EPS. In the context of Battery Energy Storage Systems (BESS) an EMS plays a pivotal role; It manages the charging and discharging of the battery storage.
