Grid stabilization costa rica

Overview

San José, Costa Rica — Costa Rica is embarking on a significant upgrade to its national electricity grid. The Costa Rican Electricity Institute (ICE) has announced a \$1 billion investment plan, spanning from 2025 to 2034, aimed at modernizing and expanding the country's transmission network. This. Costa Rica has emerged as a global leader in renewable energy, achieving near-100% renewable electricity generation primarily through a mix of hydroelectric, geothermal, wind, and solar power. It is estimated to be between 92% and 95% in 2023. The country has over 3,500 active systems and nearly 100 MW of installed capacity, almost entirely from rooftop solar. The 2021 Distributed Energy Law (Law 10086) provides a strong legal framework for self-generation. In a bold stride towards sustainability and energy independence, Costa Rica sets its sights on an ambitious expansion of its power generation capabilities. By 2032, the nation plans to augment its energy park by an impressive 675MW, backed by an estimated investment of US\$1.
