# **High voltage 10kV photovoltaic inverter**

## Overview

---

Three Phase High Voltage hybrid inverter solar enables direct MV grid connection, simplifies system design, and stabilizes large-scale renewable integration. Connects directly to 10kV+ grids, removing step-up transformers to cut losses and boost efficiency. Let's explore why this technology is becoming. An on-grid inverter's main job is to convert DC power generated from the PV array into usable AC power. It supports high PV voltage (160V~800VDC) for easy PV installation. With support for V2G and V2H applications, it enables advanced EV energy integration, making it ideal for future-ready smart homes. The X1-VAST supports 200% PV. The goal of this paper is to give an overview of the inverter, highlighting the benefits and advancements made in power electronics that have affected PV inverter technology – particularly wide-bandgap solutions such as silicon carbide (SiC) and gallium nitride (GaN). PV panels made up of cells.
