How is the wind power generation project

Overview

Wind turbines use blades to collect the wind's kinetic energy. The blades are connected to a drive shaft that turns an electric generator, which produces. Wind power or wind energy is a form of renewable energy that harnesses the power of the wind to generate electricity. since 2019, with more than 153 GW installed. Although the country's capacity more than doubled from 2014 to 2023, most of the wind energy produced is onshore, with the offshore wind farms slowly rising.
