How long can the face recognition locker be used

Overview

Fixed User Mode: Suitable for companies, factories, and offices, allowing employees to bind their facial data for long-term use. Biometric smart lockers use technologies such as facial recognition, fingerprint scanning, palm vein mapping, and iris detection to ensure secure, seamless, and personalized access. In this article, we explore how biometric smart lockers are redefining security standards, the user benefits they. Its built-in Wi-Fi management lets you remotely lock or unlock your door no matter where you are. You can use the Lockly app to create digital keys, add user faces or fingerprints, and link the lock to your smart home. Beyond personal devices, FRT operates in powerful and often invisible ways. Government agencies deploy it for surveillance. On-Device Recognition Facial recognition is processed locally on the device, without uploading to the cloud. Many regular lockers still use keys or cards for entry. Keys get copied easily or go missing. Of course, it also has a digital.
