How many volts does a 480 watt photovoltaic panel have

Overview

To be more accurate, a typical open circuit voltage of a solar cell is 0.58 volts (at 77°F or 25°C). All the PV cells in all solar panels have the same V_{oc} . This is the maximum rated voltage under direct sunlight if the circuit is open (no current running through the wires). A 2 kW system produces 1,200 watts. A digital multimeter is used to directly measure the. Solar panel voltage, V_{sp} (V) in volts equals the product of total number of cells, C and voltage per cells, V_{pc} (V) in volts.
