

Espay Solar Energy S.L.

India renewable energy growth

Overview

India's renewable energy output expanded at its quickest rate since 2022 during the first half of 2025, increasing by 24.43 billion kWh, based on a Reuters review of data from the federal grid. India added more than 40 GW of solar and wind capacity in 2025, while grid constraints, power contracting delays, and supply chain risks continued to affect project execution. India has seen the third-largest growth in power generation capacity in the world after China and the US. The rise of hybrid auctions, which combine wind and solar energy, accounted for over half of the auction volumes of 59 gigawatts (GW) in 2024, showcasing the market's move towards innovative energy solutions to enhance grid stability. Despite robust auction activity, actual installations lagged. India's installed renewable energy capacity is expected to increase to about 170 GW by March 2025 from the level of 135 GW as of December 2023.

* Ministry of New and Renewable Energy targets 500 GW non-fossil-based electricity generation by 2030, as per the Prime Minister's COP26 announcement, with.

Product Model
HJ-ESS-215A(100KW/215KWh)
HJ-ESS-115A(50KW/115KWh)

Dimensions
1600*1280*2200mm
1600*1200*2000mm

Rated Battery Capacity
215KWH/115KWH

Battery Cooling Method
Air Cooled/Liquid Cooled
