# Light up the global energy storage power supply

## Overview

---

Lithium-ion batteries dominate the market, but other technologies are emerging, including sodium-ion, flow batteries, liquid CO2 storage, a combination of lithium-ion and clean hydrogen, and gravity and thermal storage. There is a growing need to increase the capacity for storing the energy. Global energy storage additions are on track to set another record in 2025 with the two largest markets - China and US - overcoming adverse policy shifts and tariff turmoil. These systems help stabilize grids, integrate variable renewables and improve resilience.
