Microgrid Simulation Example

Overview

This is a complete model of a microgrid including the power sources, their power electronics, a load and mains model using MatLab and Simulink. In 2025, we saw the growing impact of GenAI on site traffic. Example simple Microgrid with library of PQ-based Renewables and Diesel GenSets. This particular example is used in "Part 3: Using Simscape Power. GitHub - al-chris/MicrogridSim: MicrogridSim is a MATLAB project designed for simulating and optimizing hybrid microgrid operations, originally developed for a research report. Refactor. This work presents a library of microgrid (MG) component models integrated in a complete university campus MG model in the Simulink/MATLAB environment. Always at the cusp of innovation, our solutions test the systems required for any level of microgrid. ems that can function independently or alongside the main grid. MathWorks Simscape Team (2026).
