# **Modular energy storage rack type for distributed energy resources**

## Overview

---

A resource battery rack is a modular framework designed to organize, protect, and optimize large-scale battery systems. A battery energy storage solution offers new application flexibility and unlocks new business value across the energy value chain, from conventional power generation, transmission & distribution, and renewable power, to industrial and commercial sectors. Drawing on extensive experience from companies like Grace Solar, which has engineered support. The primary objective of this project is to leverage the intelligence of, and information provided by, sensors, energy boxes and smart meters to integrate DER for developing next generation DMS to enhance optimal performance of the emerging distribution system. They offer scalable and adaptable solutions that significantly enhance energy retention and integration with.
