# **Off-grid photovoltaic solar power generation**

## Overview

---

An off grid solar system is a standalone power generation setup that operates independently from the electrical grid. Unlike grid-tied systems that can sell excess power back to utilities, off-grid systems store all generated electricity in batteries for use when the sun isn't. Create new revenue streams by selling solar-generated electricity to tenants while reducing their utility costs. Explore available resources to maximize your renewable energy investment. Extend your system's lifespan & boost. Off-grid living means relying solely on your own energy systems to power your home. It's about achieving energy independence, reducing reliance on fossil fuels, and creating a sustainable future. This off-grid solar systems guide provides a comprehensive overview of how these systems work, their benefits, key components.
