Photovoltaic energy storage laser welding principle diagram

Overview

Figure 2-1 illustrates the principle of laser welding, showcasing the key stages of the process from initial laser-material interaction to the formation of the weld seam. Three types of laser welding seam cross-sections are shown in Figure 2-2. The beam causes the metal or metals to heat and melt at the point of contact. Laser micro welding with fibre lasers (1070 nm) meets the requirements placed on joining technology. Due to the high beam quality, very small spot diameters and thus very high intensities can be achieved.
