## Overview

---

This foundational framework securely anchors solar panels to rooftops, ground sites, or—in Leon Solar's specialty—elevated poles. Designed to withstand harsh weather while optimizing sunlight exposure, these structures are engineered for longevity. Because solar panels have a 25-year lifespan, many consumers considering a solar installation are concerned about space, particularly in metropolitan areas where rooftop space is scarce and expensive. Well, let's face it - 23% of solar project delays in Q1 2025 stemmed from inadequate mounting structures according to a fictitious. Honestly, you can't just buy a stack of solar panels, toss them on a roof, and expect a smooth ride. I mean, it needs to be safe and built to last. Galvanized iron and advanced steel coatings help resist corrosion, especially in large-scale solar farms.
