Photovoltaic panel nameplate parameters

Overview

The nameplate ratings on photovoltaic (PV) panels and modules summarize safety, performance, and durability specifications. Safety standards include UL1730, UL/IEC61730, and UL7103, a recent standard for building integrated photovoltaics (BIPV). The purpose of this document, “A Solar ABCs Proposed Standard on Nameplate, Datasheet, and Sampling Requirements of Photovoltaic Modules,” is to convert the policy report into a PV module. Commercially available solar panels will typically have the following specifications on their name plate: Maximum power derivable from the solar panel, P_{max}. There are other technical parameters commonly found on the name plate of solar panels such as panel dimension and weight. Never exceed inverter's maximum input voltage. erance leniency as well as measurement uncertainty | module data at only three rating conditions: standard test conditions (STC), nomi-nal operating cell temperature (NOCT), and low irradiance condi-tions (LIC) IEC 61853-1 requires reporting the module data at two additional rating conditions of.
