## Overview

---

Used primarily in the screen-printing process of solar cells, this paste ensures robust electrical connections are formed between the finger lines on the cell's front side, which transport the generated electrical current. optimized utilization of photovoltaic silver paste. This paste may be cofired with standard DuPont™ Solamet® front side silver such as DuPont™ Solamet® PV16X or PV17X series, back side (p-type) Aluminum conductors such as DuPont™ Solamet® PV3XX series. Silver has excellent electrical conductivity and can. PVSP is a specialty coating material composed of fine silver particles, organic solvents, and organic polymers. Key components include silver nanoparticles, crucial for electrical conductivity, 2.
