## Overview

---

A photovoltaic power station, also known as a solar park, solar farm, or solar power plant, is a large-scale grid-connected photovoltaic power system (PV system) designed for the supply of merchant power. They are different from most building-mounted and other decentralized solar power because they supply power at the utility level, rather than to a local user or users. Utility-scale solar i. HistoryThe first 1 MWp solar park was built by Arco Solar at Lugo near, at the end of 1982, followed in 1984 by a 5.2 MWp installation in . Both have since been decommissioned (although. The land area required for a desired power output varies depending on the location, the efficiency of the solar panels, the slope of the site, and the type of mounting used. Fixed tilt solar arrays using typical panels of about 15%. Most solar parks are PV systems, also known as free-field solar power plants. They can either be fixed tilt or use a single axis or dual axis . While tracking improves the overall performanc.
