PHS systems pump water from lower to upper reservoirs, then release it through turbines using gravity to convert potential energy to electricity when needed. 17,18 Annual PHS additions have nearly. A battery energy storage system (BESS), battery storage power station, battery energy grid storage (BEGS) or battery grid storage is a type of energy storage technology that uses a group of batteries in the grid to store electrical energy. 1 Batteries are one of the most common forms of electrical energy storage. The first battery, Volta's cell, was developed in 1800.
