Co-locating solar photovoltaic (PV) panels and agricultural operations on the same piece of land is referred to as agrivoltaics, solar sharing, or agro photovoltaics. By making it possible for crop cultivation and solar power production to coexist, this strategy attempts to boost the productivity. This approach combines agriculture with solar energy production by installing photovoltaic (PV) panels above or among crops and farmland. Instead of sacrificing farmland for solar farms, agrivoltaics allows land to deliver two yields: food (or crops) and clean electricity.
