## Overview

---

Molten Salt Solar Power Tower Technology is an advanced concentrated solar power (CSP) system that utilises molten salt as both a heat transfer and storage medium. In these systems, a central receiver, located atop a tower, absorbs concentrated solar radiation reflected by an array. At the end of 2019 the worldwide power generation capacity from molten salt storage in concentrating solar power (CSP) plants was 21 GWhel. This article gives an overview of molten salt storage in CSP and new potential fields for decarbonization such as industrial processes, conventional power. A molten salt solar tower is a renewable energy plant designed to capture solar energy and convert it into electricity. reducing solar thermal energy costs. Overv egrated in conventional power plan s.
