Solar energy storage cabinet system vsg

Overview

The Virtual Synchronous Generator (VSG) function, as an advanced control strategy, endows energy storage inverters with the ability to simulate the characteristics of traditional synchronous generators, enabling them to demonstrate unique advantages in various application scenarios. In the face of this challenge, SCU uses the advanced logic of “solar energy storage diesel generator” to tailor solutions for Middle Eastern customers and light up the light of hope in places without electricity. Photovoltaic is the basis, for capturing the power of sunlight. The 30kW bi-directional inverter, NRTL certified according to global safety/grid/EMC code, designed and manufactured by Sinexcel with formfactor of both.
