Solar inverter reports ground wire fault

Overview

If the inverter displays the event numbers 3501, 3601 or 3701, there could be a ground fault. The electrical insulation from the PV system to ground is defective or insufficient. If a ground fault occurs, parts of the system may still be live. Most inverter ground fault issues are understandable, diagnosable, and fixable—if you know what to look for. This includes locking out any disconnects and enclosures to prevent someone from mistakenly flipping breakers or reconnecting inverters. Tools: Start off by inspecting.
