Solar panel installation clearance

Overview

While we generally recommend about 18 inches of clear space between the other side of the panels and the upper side of the roof system, we would recommend that the underside of the purlins also be installed at least 12 inches away from the roof surface. And while a lot of attention has been given to panel efficiency and smart technology, there's an often-overlooked factor that can significantly impact the success of your projects: ground clearance. At MT Solar, we specialize in designing and manufacturing solar pole mount structures. With a focus. This ensures that the installation does not interfere with the issuance of a new warranty or alter the terms of any existing warranties. Pre-Installation Inspection: For installations over an existing warrantied roof, notify the manufacturer and arrange for a Field Service Representative to conduct. Some solar panel companies will remove their solar panels for free if there's a leak and it needs to be fixed, but it's complicated to get a solar panel company out and then get a roofing company out together coordinated, in sequence. 4) Ground-mounted photovoltaic panel systems. Getting them right protects safety, speeds permitting, and prevents costly redesigns.
