# **Solar photovoltaic panels connected to the grid**

## Overview

---

There are two basic approaches to connecting a grid-tied solar panel system, as shown in the wiring diagrams below. Here are design tips for methods of PV system utility interconnection. Load-Side Connection Dominates Residential Installations: The 120% rule limits total. To connect solar panels to the grid, you need to install a bi-directional meter on your home. While solar panels generate DC electricity, the grid operates using AC (alternating current) electricity. By the time your solar system is ready to be connected to an electrical network, you should be done with finding a contractor, getting permits from authorities and having solar panels installed on your roof.

What Are Grid-Connected Solar

Power Systems? What Makes Installing A Grid-Connected Solar System Advantageous The Bottom Line As the name suggests, a grid-connected solar system is tied to the utility grid. What distinguishes it from other solar setups is that the energy runs in two different ways. When your household requires more energy than your solar system generates, the house draws in energy from the utility. Likewise, you supply the grid with your solar energy when See more on [avasolar.energy.gov](http://avasolar.energy.gov)
