Solar power generation counterweight base

Overview

The counterweight base body is formed through blow molding of HDPE plastic, is low in manufacturing cost, high in strength, high in manufacturing efficiency, not prone to aging, capable of being repeatedly used and more convenient to transport; the solar panel can be installed more. The counterweight base body is formed through blow molding of HDPE plastic, is low in manufacturing cost, high in strength, high in manufacturing efficiency, not prone to aging, capable of being repeatedly used and more convenient to transport; the solar panel can be installed more. The utility model discloses a counterweight base for supporting a photovoltaic power generation solar panel, wherein a first mounting hole is formed in the surface of a first mounting plate in a penetrating manner, two groups of support frame mounting grooves for mounting support frames are formed. Counterweight pile photovoltaic support installation is poured into the ground to support the solar array. This method is commonly used for smaller-scale installations or regions with specific soil conditions. the concrete foundation construction is slow, and the. [0027] see Figure 1-4, the present invention provides a technical solution: a counterweight base for land layout of photovoltaic power generation solar panels, including a hollow counterweight base body 1, and both sides of the counterweight base body 1 are provided with concave escape grooves 2. Counterweight to hold the structure in place. Counterweight costs are a significant portion of the overall PV plant's cost and must be optimized expressed any regrets about their decision. Solar energy is the wave of the in Solar Power for Factories & Warehouses. Our Solar Panels are perfect for.
