Step on the accelerator and the generator will whistle

Overview

If your car whistles when you press the gas pedal, it's likely due to worn-out window seals allowing wind in the cabin. It could also be a vacuum leak from a damaged or loose hose. Worn belts. A high-pitched sound when pressing the accelerator, often described as a whistle or hiss, indicates that a component is experiencing friction or that air is moving through an improperly sealed pathway. The change in engine load during acceleration alters pressure and vacuum dynamics, exposing these. If your car is suddenly loud and making new noises when you accelerate, it's important to find the underlying issue right away. There are many different potential causes behind vehicle-related whistling noises. Below are. I've got a 17 EX-L, with the 4 cyl engine.

Step on the accelerator and the generator will whistle
