

Espay Solar Energy S.L.

The current status of photovoltaic energy storage in various countries

Overview

34 countries installed more than 1 GW of new capacity in 2024; 23 countries now exceed 10 GW in total installed capacity. Utility-scale PV led global installations, but distributed PV remained strong in key markets including Germany, Türkiye, and Brazil. In 2024, global photovoltaic capacity rose to more than 2.6 TW in 2023, with over 600 GW of new PV systems commissioned. This marks another record year for PV deployment, despite continued overcapacity in manufacturing and falling module prices that placed pressure on the entire. By the end of 2023, photovoltaic solar arrays provided an estimated 6.5% to 7% of the world's electricity, marking a continued rise in its contribution to global energy generation. According to the 2022 edition of the annual report published by SolarPower Europe, "global solar capacity doubled in 3. This publication presents renewable energy statistics for the last decade (2015-2024). The International Renewable Energy Agency (IRENA) produces comprehensive, reliable datasets on renewable energy capacity and use worldwide. Renewable energy statistics 2025 provides datasets on power-generation. Licence: CC BY 4. Hydrogen electrolyzers are not included. Global installed energy storage capacity. Solar photovoltaics is one of the most cost-effective technologies for electricity generation and therefore its use is growing rapidly across the globe. Only in that last year. The Global Solar Power Tracker is composed of worldwide facility-level data on utility-scale (1 MW+) solar photovoltaic (PV) and solar thermal facilities, as well as country-aggregated distributed (<1 MW) solar PV data.

The current status of photovoltaic energy storage in various countries

Snapshot of photovoltaics - March 2025

Clean energy investments increased by 10.7% per annum to USD 2,083 billion or 1.9% of global gross domestic product in 2024. Investments in solar photovoltaics even grew by 20.5% to reach USD 514 ...

Current Status and Future Direction of Photovoltaics

This paper provides an overview of the current status of photovoltaics and discusses future directions for photovoltaics from the view-points of high-efficiency, low-cost, reliability, and ...

Global installed energy storage capacity by scenario, ...

Global installed energy storage capacity by scenario, 2023 and 2030 - Chart and data by the International Energy Agency.

Solar energy status in the world: A

comprehensive review

It examines the current state of solar power and related academic solar energy research in different countries, aiming to provide valuable guidance for researchers, designers, and policymakers ...

Solar Power by Country 2026

Data and analysis including a list of solar power in every country in the world, countries with the most solar power, and countries that generate the highest percentage of their electricity from solar power.

Global Solar Power Tracker

The Global Solar Power Tracker is composed of worldwide facility-level data on utility-scale (1 MW+) solar photovoltaic (PV) and solar thermal facilities, as well as country-aggregated distributed (<1 ...

Renewable energy statistics 2025

Data was obtained from various sources, including an IRENA questionnaire, official national statistics, industry association reports, consultant reports and news articles.

Solar Power by Country 2026

Data and analysis including a list of solar power in every country in ...

Snapshot 2025

Utility-scale PV led global installations, but distributed PV remained strong in key markets including Germany, Türkiye, and Brazil. Curtailment is increasingly prevalent in high-penetration markets, ...

Installed solar energy capacity

At the link below you can find a detailed description of the structure of our data pipeline, including links to all the code used to prepare data across Our World in Data.
