# **The dangers of solar power stations in the United States**

## Overview

---

At least 15% of counties in the U. have effectively halted new utility-scale wind, solar, or both, USA TODAY found. Solar energy technologies and power plants do not produce air pollution or greenhouse gases when operating. Using solar energy can have a positive, indirect effect on the environment when solar energy replaces or reduces the use of other energy sources that have larger effects on the environment. It is essential to recognize that, like any energy solution, solar energy presents its own set of risks and challenges, including health risks and safety concerns. This section addresses baseline environmental assessment prior to construction, stormwater management, leaching of metals from. As the planet warms and climate disasters grow more costly, the U. The main issue is that most recycling systems are ill-prepared for the volume and complexity of solar panel waste.
