# **The function of the double-hole pressure plate of photovoltaic bracket**

## Overview

---

Photovoltaic pressure plates are one of the indispensable accessories when installing solar panels, which are firmly fixed on the bracket or roof by mechanical connection or gluing. The double hole design, while cost-effective, has become sort of a double-edged sword for installers. It is made of high-strength, corrosion-resistant materials and is designed for the installation requirements of various photovoltaic modules (single glass, double glass, single crystal). The brackets are designed to securely hold the panels in place while allowing for proper air circulation, which keeps the panels cool and operating efficiently. What are solar panel brackets?
