The maximum number of photovoltaic panels connected in series

Overview

The maximum string size is the maximum number of PV modules that can be connected in series and maintain a voltage below the maximum allowed input voltage of the inverter. The Module Voc_max is calculated using the coldest temperature when the modules produce the highest expected. In this guide, we focus on the series connection of solar panels, including its advantages, potential risks, and how to calculate the maximum number of solar panels can be connected in series. Check the Maximum PV Input Power Step 2. Each series connection adds up the voltage (Voc).
