# **The photovoltaic combiner box has interference signals**

## Overview

---

Inconsistent readings or signal loss may point to a failed sensor, misconfigured communication address, or wiring interference. Lastly, don't forget to examine the grounding system. Loose or corroded grounding can introduce electrical shock hazards and damage the solar combiner.

Electromagnetic interference refers to the disruption of the normal operation of electronic devices caused by electromagnetic radiation. Conducted EMI is transmitted through electrical conductors, such as power lines and. Over time, vibrations, temperature changes, and environmental factors can cause the connections to loosen. Corrosion can occur when the box is exposed to moisture or harsh chemicals. Here's how to troubleshoot and maintain it properly to keep your PV system operating safely and. Summary: Interference signals in photovoltaic combiner boxes can reduce solar system efficiency by up to 15%. I am Wao Wu, co-founder and Sales Director at ADNLITE.
