# **What is the diameter of the nut for the photovoltaic bracket**

## Overview

---

Photovoltaic cells and solar plants often require bolts & nuts of bigger diameters in hot dip galvanised or some special finish. As solar installations surge globally—with the market projected to grow 8.7% annually through 2030—the humble spring nut has become a critical component in photovoltaic (PV) bracket systems. Let's unpack what makes these tiny parts so essential. These cells are usually made from silicon alloys and are the technology most people have become familiar with - chances are you may have one on your. When it comes to solar panel installations, choosing the right fasteners is essential for ensuring the longevity and efficiency of the system. Specific types of nuts and bolts are required for securing solar panels, depending on the mounting system used. For example, with traditional racking. The "L" bracket holds the rail down to the 4X4 mounts. The IronRidge rail is pictured above.
