What is the wind blade that generates electricity called

Overview

Wind turbines have been called “the windmills of the third millennium”. They use air currents in order to produce a valuable resource: electricity. The wind turbine (also known as wind generator or wind turbine generator) is a small engineering masterpiece that appears simple at first. Wind turbines work on a simple principle: instead of using electricity to make wind—like a fan—wind turbines use wind to make electricity. Wind turns the propeller-like blades of a turbine around a rotor, which spins a generator, which creates electricity. Wind is a form of solar energy caused by a. How does a wind turbine generate electricity?

The wind is pushing the blades to move, as the blades are moving the turbine that is connected to the generator and the generator produces electricity
What are the parts which make up the tower?

What are the parts which make up the nacelle?

d. As renewable energy technology continues to advance and grow in popularity, wind farms like this one have become an increasingly common sight along hills, fields, or even offshore in the ocean.
