# **Where is the best place to connect the photovoltaic panels**

## Overview

---

First, let's talk about where solar panels should be placed. Ideally, they should be installed in a location that gets direct sunlight for most of the day. However, east- or west-facing roofs can also work well. To ensure optimal placement, it's. Installers have two methods for connecting photovoltaic panels at their disposal - series connection and parallel connection. Let's take a closer look at all the. Panels can be placed on the ground or roof and face east or west and still collect substantial amounts of energy - more than enough to save money on monthly electricity bills and reduce overall energy consumption. Arrays that are appropriately oriented can improve energy output by up to 30% or more <sup>2</sup>. However, factors such as roof slope and proximity to the equator may have some homeowners considering other directions (including north).
